DRONE CLEANING SCOPE

FC Wash owns an Apellix B2 aircraft. Proposed drone services include pressure washing, soft washing and exterior window cleaning for suitable commercial, industrial and institutional surfaces.

Facades and elevated glass

A site-specific cleaning approach for hard-to-reach exterior surfaces.

Tanks and industrial structures

Exterior cleaning for storage tanks, silos and industrial properties. No interior tank entry.

SUPPORTING CLEANING METHODS

Interior/exterior windows, water-fed poles with deionized water, manual detailing and ground pressure/soft washing complement drone work where hands-on cleaning is needed. Equipment and staffing are planned by scope.

Drone-cleaning application | Reference imagery

GOVERNMENT & DEFENSE APPLICATIONS

Potential applications include exterior cleaning at military installations and public facilities. Apellix describes its separate Blue configuration as NDAA Sections 848/889 compliant. FC Wash must confirm equipment availability, configuration and contract/site approvals.
